1. What are the components of a WebMap in the Map Viewer center section (not the white or black menus) in other words what are the types of layers called?

The components of a WebMap in the center section are operational layers (ex. feature layers, tile layers) and the basemap layer.

2. Starting from a WebMap in ArcGIS Online, where do you click to create a Web App (such as a StoryMap or Instant App)?

You would click on Create App on the left sidebar, then ArcGIS StoryMaps or Instant Apps.

3. An alternative to the method you described in Question 2, what are two options for starting a Web App?

Go to Content on the main organization page, then click on the WebMap. In the item details page, click Create app, then click on one of the dropdown apps available.

Another method is to open the ArcGIS app launcher by clicking the 9 dots on the top right corner, then clicking the desired app.

4. If you have joined a table to a layer, and want to Share the WebMap, does the table have to have the same sharing (organization or Publicly)? To answer this question switch the sharing of your WebApp to organization or Public, see what the popup says, then switch back to Owner.

Yes, the table has to have the same sharing access as the WebApp if sharing to organization or public.
